You might be thinking of when SWS went out there on behalf of TCEQ in Dec 2015 as an emergency action and pumped out the sumps. Then they went out again to address a bulging drum (don't remember when) but I don't think they did much of anything that time.

Susan,

TCEQ contacted EPA on March 17, 2016 and requested assistance with soil and liquid waste sampling. Round of assessments were done in April (12 and 13th) and Sept. (19 through 23rd) 2016.

Was the site referred to us in Jan 2016? Was assessment conducted twice? Can you give me dates?

In 2015 TCEQ did an investigation of the Lane Plating facility after it had ceased operations and closed. In Dec 2015 Lane Plating filed for bankruptcy and TCEQ did a limited removal action. In January 2016 TCEQ referred the site to the EPA. EPA conducted a limited cleanup at the site in October and November of 2016 and removed 188,000 pounds of waste material. A site investigation resulted in the site being listed on the NPL (Superfund site list) in May 2018.
